

Solve each system by substitution.

1)  $y = x + 1$  (2, 3)  
 $y = 3x - 3$

3)  $y = -2x - 4$  (-1, -2)  
 $y = 3x + 1$

5)  $y = 2x + 4$  (-4, -4)  
 $3x - y = -8$

7)  $2x - y = 2$  (0, -2)  
 $y = -2x - 2$

2)  $y = x + 1$  (0, 1)  
 $y = -2x + 1$

4)  $y = 3x - 5$  (1, -2)  
 $y = 4x - 6$

6)  $y = x + 1$  (-2, -1)  
 $3x + 2y = -8$

8)  $y = 3x - 3$  (1, 0)  
 $2x + 2y = 2$
